PROFESSIONAL SUMMARY

Full-stack Software Engineer with 4+ years of experience building enterprise applications with .NET, Angular, SQL Server, and Elasticsearch. Experienced in database and geospatial performance optimization, legacy system modernization, microservice architecture, and third-party integrations.

EXPERIENCE

Konexus, Inc.

Eagle, ID (Remote)

Software Engineer

June 2024 – Present

- Optimized SQL Server geospatial recipient queries used for emergency weather alerts, making recipient lookups 4x faster.
- Cut database query volume by more than 50 percent across core alerting workflows, reducing server load and accelerating alert delivery.
- Led the design and implementation of a self-service usage-reporting microservice using .NET and Elasticsearch to aggregate millions of customer activity records.
- Designed and secured production REST APIs supporting complex third-party integrations and emergency alerting workflows.
- Built an AI-assisted content moderation system that automatically identified and flagged potentially inappropriate user-submitted content.

Junior Software Engineer

June 2022 – May 2024

- Modernized legacy .NET desktop and web workflows by rebuilding them as responsive features within an Angular single-page application.
- Migrated legacy weather-alerting functionality into a modular integration architecture, simplifying tenant configuration and enabling more consistent deployments.

RELEVANT SKILLS

Languages: C#, TypeScript, JavaScript, SQL, Go

Frameworks: .NET, ASP.NET Core, Angular, Node.js, Svelte

Data & Infrastructure: SQL Server, Elasticsearch, AWS, Docker, PocketBase

Testing & Delivery: NUnit, Karma, Jenkins, Git

Architecture: REST APIs, Microservices, System Integration, AI Integration

PROJECTS

Real-Time Conferencing Platform 🌀 | *Angular, WebSockets, WebRTC, Node.js*

- Built an Angular conferencing application with persistent, WebSocket-based signaling and lobby session management.
- Implemented low-latency peer-to-peer voice communication and live screen sharing using WebRTC mesh connections.
- Designed the client connection lifecycle and real-time communication flow for multi-user conferencing sessions.

Textly – AI Chatbot and Writing Software 🌀 | *Svelte, PocketBase, Go, Docker*

- Built a Markdown writing application and document database with asynchronous AI-assisted suggestions and text transformations.
- Developed a concurrent Go backend for stateful AI conversations, including context-window management, streamed model responses, and persisted conversation histories.
- Designed hierarchical document and folder structures optimized for efficient relational lookups and navigation.

EDUCATION

Bachelor of Science in Computer Science

May 2021

California State University, Stanislaus

GPA: 3.81
