SUMMARY

Full-Stack Developer with nearly 4 years of experience architecting scalable applications, microservices, and databases. Proven track record in optimizing backend performance, modernizing legacy systems, and developing real-time communication platforms.

EDUCATION

California State University, Stanislaus — Bachelor of Science in Computer Science — 3.81 GPA
May 2018 – May 2021

EXPERIENCE

Konexus, Inc. — Eagle, Idaho (Remote) June 2022 – Present
Full-Stack Engineer

- Led implementation of a self-service client usage microservice backed by Elasticsearch, processing and aggregating millions of client transactions.
- Optimized user geospatial query lookups, query lookup time by 300 percent for critical emergency weather alerting.
- Decreased SQL database query lookups by over 50 percent for alerting systems, reducing server load and alert send times.
- Architected RESTful APIs for third-party integrations with our system.
- Refactored legacy .NET interfaces into a modern, responsive Angular web application.
- Engineered the transition of legacy weather alerting systems into a module-based integration system, providing a streamlined setup and configuration of weather alerts.

PROJECTS

Real-Time Conferencing Platform

Technologies: Angular, WebSockets, WebRTC, Node.js

- Built a lobby-based application managing WebSocket connections for real-time, decentralized communication.
- Implemented low-latency voice capabilities and live client-to-client screen-sharing functionality.

Textly - AI Chatbot and Writing Software

Technologies: Svelte, Pocketbase, Go, Docker

- Developed a writing utility and database featuring AI-driven suggestions, text improvements, and conversational support.
- Engineered a Go backend to manage persistent AI chatbot state, securely handling server-provided API keys, full chat history, and context windows.
- Designed persisted document data structures with hierarchical folder trees to optimize content organization.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, C-Sharp, TypeScript, Go
- **Frameworks and Tools:** Angular, SQL Server, .NET, ASP.NET, Git, GitHub, BitBucket, Claude, Node.js, Jenkins, NUnit, Jasmine
- **Cloud and Infrastructure:** Docker, Elasticsearch, AWS
- **Concepts:** Microservices Architecture, RESTful APIs, Large Language Models, Agile, Databases
